EDUCATION

VIT Bhopal University

Bhopal, India

Integrated M.Tech in Artificial Intelligence; CGPA: 8.17/10.0

2022 – 2027

Courses: Operating Systems, Database Management Systems, Data Structures & Algorithms, Machine Learning, Deep Learning, Computer Vision, Natural Language Processing

TECHNICAL SKILLS

Programming: Python, Java, C++

Backend & APIs: FastAPI, Django REST Framework, REST API Development

Databases: PostgreSQL, SQL (Schema Design, Data Validation)

Cloud & DevOps: Docker, AWS, Jenkins, Git

Core Computer Science: Operating Systems, Database Management Systems, Data Structures & Algorithms

Machine Learning & AI: PyTorch, TensorFlow, Scikit-learn, Transformers, OpenCV

Certifications: ML with Python (University of Michigan), Cloud Computing (IIT KGP – NPTEL), DevOps (Udemy)

EXPERIENCE

House of PY Technologies

Surat, Gujarat

Python Developer Intern

Nov 2025 – Present

- Built and maintained authenticated RESTful APIs for ERP modules, enabling secure user access and efficient request handling.
- Designed relational database schemas in PostgreSQL to support user accounts, access control logic, and transaction records.
- Identified and resolved backend defects through systematic debugging, enhancing service availability and workflow consistency.

Elevate Labs

Remote

Data Analyst Intern – Exploratory Analysis & Predictive Modeling

May 2024 – July 2024

- Developed regression-based pricing models using feature engineering and large-scale dataset preprocessing techniques.
- Engineered a real-time Twitter sentiment analysis pipeline processing 10,000+ tweets for trend detection and reporting.
- Performed exploratory data analysis to uncover behavioral patterns influencing pricing, sentiment, and engagement metrics.

PROJECTS

PTSD Detection Tool (Micro-expression Recognition) — Python, TensorFlow, OpenCV, CNN

- Developed a video-based micro-expression recognition pipeline for analyzing high-frame-rate facial data.
- Integrated muscle-movement tracking, expression segmentation, and frame-level CNN classification into a structured processing workflow.

Hybrid CNN-ViTNet for Satellite Image Classification — CNN, ViT, TensorFlow

- Designed a hybrid CNN–Vision Transformer architecture combining localized feature extraction with global attention mechanisms.
- Implemented multi-scale feature fusion to enhance classification performance across diverse satellite imagery resolutions.

SST-5 BERT+++ Sentiment Classifier — BERT, RoBERTa, Transformers, Cross-Attention, Python

- Built a transformer-based sentiment classifier using BERT and RoBERTa with a custom cross-attention mechanism.
- Developed structured training and evaluation workflows for fine-grained multi-class sentiment analysis.
